

Personal Income by States in 1961

All States Show Recovery From Cyclical Low

In Most Areas Income at Record High

THIS annual report on the State distribution of consumer incomes records the experience of each State in 1961, as measured by the flow of personal income.

Preliminary estimates of total and per capita personal income in 1961 were given in the April issue of the *Survey*. This report presents the comprehensive annual estimates made at this time for total and per capita income for the period 1959-61, plus detailed breakdowns of the total by industrial source and type of income. Both the minor revisions from the preliminary 1961 aggregates, and the additional detail presented, reflect the large amount of basic information available from Internal Revenue Service reports on income from rents, dividends, and interest; payroll data for the full year 1961 from unemployment insurance reports; and the revised national totals given in the July *Survey* for many income components. See note on page 11 for sources of personal income for years prior to 1959.

State estimates of disposable income—personal income less personal tax and nontax payments—normally presented in alternate years, are not shown in this issue of the *Survey*. They are, however, available upon request.

A review of economic developments as they affected the geographic distribution of income in 1961 accompanied the preliminary figures presented earlier this year. Highlights only from that review are summarized here. Factors underlying income changes in the individual States can be studied through the percentages in table II.

Incomes sharply higher

Individual incomes rose rapidly throughout the country during the last three quarters of 1961 as cyclical re-

covery and continued expansion combined to send economic activity to new highs in all regions and in most States. Personal income in the country as a whole rose \$27 billion, or 7 percent from January to the closing months of last year. At year-end, consumer incomes were appreciably higher than in the opening months in nearly every State as most industrial sources of income continued to expand at moderate rates.

Income up in all regions

On an annual basis, personal income in the country as a whole totaled \$414 billion in 1961, a rise of \$15 billion or 4 percent over 1960. By regions, per-

centage increases were fairly uniform. In four of the eight regions—the Southeast, Southwest, Rocky Mountain, and Far West—consumer incomes rose 5 percent from 1960 to 1961. In New England and the Plains States, the rise equalled the national rate of 4 percent; in the Mideast it was a shade less. Only in the Great Lakes Region, where the recession had hit hardest did the rate of income change—2 percent—differ markedly from that in the country as a whole. This was because manufacturing income, which is unusually important in this area, registered a very small gain on a year-to-year basis. Nonmanufacturing income flows in this region were up 5 percent over 1960—the same as in the Nation.

Record per capita income

Nationally, per capita income last year amounted to \$2,263—2 percent above the previous record of \$2,215 attained in 1960. Since population increased in nearly all States in 1961, the rise in average incomes was less than that in total income in most areas. Generally, State per capita increases fell within a range of 1 to 4 percent. In a number of States such as North Dakota, Arkansas, Montana, and Michigan, per capita incomes rose or fell appreciably under the impact of farm income fluctuations or of the decline in durable goods production.

Numerous factors were responsible for differences in rates of income change among the States last year. In most instances, their effects were mild and no single development dominated. The main features affecting the personal income flow in 1961 were: (1) A decline in durable goods production; (2) fluctuations in farm income; (3) the expansionary influence of government; and (4) long-term trends.

WAGE AND SALARY CHANGES IN THE 1960-61 CYCLE

In Most Regions Private Nonfarm Payroll Gains Exceed Earlier Declines

Recession—effect on Great Lakes Region

In the country as a whole the mild 1960-61 recession, spanning the year-end, resulted in little more than a leveling-off in the flow of personal income. Industrially, it focused in durable goods manufacturing; geographically, it had most effect on the Great Lakes States, the only region to experience a fall in total earnings of factory workers in 1961. Concentration of the manufacturing reduction in the Great Lakes Region reflected the fact that over half of the three industries with largest declines in 1961—automobiles, nonelectrical machinery, and primary metals—are located in this area. Moreover, whereas nationally, payrolls in these three industries declined 4 percent, in the Great Lakes States they were off 7 percent.

In New England and the Mideast, factory payrolls were little changed from 1960 to 1961, reflecting the lesser reliance of these two regions on durable goods manufacturing. In the other five regions, manufacturing was less of a limiting factor on the flow of total income. This was the result of the smaller role of the industry as an income source and the more stable character of the types of manufacturing activity predominant in these areas.

Farm income changes vary widely

Nationally, income from agriculture rose 7 percent in 1961—a reflection of increased livestock production, smaller crop output, somewhat higher production expenses, and a large rise in Government payments to farmers. On a State basis, farm income in 1961, exhibiting its characteristic volatility, ranked with manufacturing in causing shifts in the geographic distribution of income. There was little evidence of conformity to the national pattern among the States. Changes in agricultural income varied within the broad range of Illinois' 37 percent rise, to a decline of more than one-half in North Dakota.

Farm income was a limiting factor in New England, the Mideast, the Far West, and Rocky Mountain regions,

In the first three regions, the declines stemmed mainly from lower receipts from poultry, eggs, fruits, and vegetables. In the Rocky Mountain States agriculture was a weak spot in an otherwise buoyant economy. In the four remaining regions, there were substantial gains in income from farming. The largest relative rise—one-fourth—was in the Great Lakes States where the advance did much to counter the decline in manufacturing and to sustain the flow of income in the distributive and service industries.

Government supports recovery

Government income payments to persons were the most expansionary element in the income flow last year. Nationally, they rose 9 percent from 1960 to 1961 compared with an increase of 3 percent in income from all other sources.

The major factor making for geographic irregularities in the flow of income from government was the large advance in unemployment insurance benefits. These rose from \$2 billion in 1960 to \$4½ billion in 1961. In five States—New York, Pennsylvania, Mich-

SURVEY OF CURRENT BUSINESS

August 1962

igan, Ohio, and California—the increases in UI benefits ranged from \$100 million to \$160 million. Together, residents of these States received \$2 billion from this source last year.

Dollar increases in government payrolls were large, as both number of employees and their average wages rose. The largest changes in Federal wages and salaries were associated with shifts of military personnel. Relative increases in State and local payrolls showed wider variations than

those of Federal agencies, with increases common in both the educational and nonschool portions of State and local governments.

There were substantial increases in public assistance in a half dozen States, mainly those where the recession had greatest impact. In Kentucky, payment of a \$90 million bonus to veterans was responsible for a sizable increase in government disbursements. In Pennsylvania, a reverse situation obtained as the bulk of that State's bonus to

veterans was paid in 1960. In both instances, the change had a measurable effect on total income.

State changes in mining and transportation activity—largely declines—bore the imprint of the dip in industrial demand for mineral products and for transportation services. Geographic shifts in construction activity tended to parallel developments in other commodity-producing industries, with some offsets provided by the Federal Highway Program; the construction of

SURVEY OF CURRENT BUSINESS

missile sites, and other defense activities.

In a number of States, particularly in the Southwest and West, there were strong income gains and no discernible effects of the 1960-61 downturn in business activity. Here, the increases represented a continuation of the growth that has characterized States of these areas in recent years. Since 1957, relative increases in nonfarm income in Arkansas, Arizona, California, Colorado, Idaho, Nevada, South Dakota, and Utah have exceeded the national rate by good margins.

NOTE

Estimates of personal income by States for all years since 1929 may be found in the following publications of the Office of Business Economics: "Personal Income by States Since 1929." This supplement to the Survey contains estimates of total income for the years 1929-53 and of per capita income for the period 1929-49. The text of this publication gives complete explanations of the concept, statistical derivation, and reliability of the estimates as well as an analysis of geo-

graphic income shifts over the period 1929-55. The Personal Income supplement also contains detailed breakdowns of income in each State according to type and industrial source for the years 1929-53. Estimates of total income since 1953 and of per capita income since 1949 are contained in tables 1 and 2 of this issue of the Survey. Details for 1954-56 may be found in the August 1959 Survey; for 1957, in the August 1960 Survey; for 1958, in the August 1961 Survey, and for 1959-61 in tables 4-70 in the August 1962 Survey.

Footnotes to Table 63:

1. Consists of net income of farm proprietors, farm wages, and farm "other" labor income, less personal contributions under the OASD program.

2. Consists of income disbursed directly to persons by the Federal and State and local governments. Comprises wages and salaries (net of employee contributions for social insurance), other labor income, interest and transfer payments.

3. Equals total personal income less farm income and government income disbursements.

Note: United States totals include Alaska and Hawaii.

Footnotes to Table 70:

1. Consists of wage and salary disbursements, other labor income, and proprietors' income.

2. Does not include earnings of military personnel.

3. Less than \$500,000.

Note: United States totals include Alaska and Hawaii.
